

### Telescoping Card

You will need 4 framelits that step down in size from the other. Let's call the largest framelit 1 and the next size down 2, and the next size down 3 and the smallest 4

1. Stamp your image on three different pieces of cardstock.
2. You will place framelit 1 and 3 on the first stamped image, placing 3 in the center.
3. You will then take size 2 and center it on the 2<sup>nd</sup> stamped image.
4. Then size 1 on last also center it on the image.
5. You will then use dimensionals to place #2 on #1 and then #3 on #2 and then #3 on #4.
